

JOSEPH GRAY

(256) 762-5232 | joseph.gray.works@gmail.com

Education

University of North Alabama, Florence, AL

Bachelor of Science in Computer Science | Graduated May 2024

Experience

Software Developer, Bank Independent, Florence, AL | 2023–Present

- Developed internal and external software applications to improve operational efficiency across multiple departments.
- Built a Webex API dashboard using Node.js to display live user activity and call queue metrics for internal monitoring.
- Developed a financial reconciliation tool using Node.js and SQL that allowed accounting teams to reconcile Elavon and Jack Henry records across selectable date ranges, including downloadable reporting tables.
- Created an email opt-out compliance system using Python and HubSpot integrations that processed user responses and automatically unsubscribed users through the appropriate APIs.
- Assisted in development of the 'Impaqt' processing platform for Interstate Billing Services, collaborating closely with the project lead to implement functionality using a custom markup language.
- Developed a large-scale task management and onboarding platform in C#/.NET used for employee onboarding, offboarding, task scheduling, and call logging.
- Mentored and assisted an incoming software development intern on the onboarding platform project and development workflows.
- Assisted senior developers by implementing .NET workarounds and fixes for issues involving legacy VB-based scripts and processes.

Software Development Intern, Advanced Information Technologies, Florence, AL | May 2021–July 2022

- Assisted in developing and documenting code changes for customer software projects.
- Modified HTML and hosted website files for customer-facing web applications.
- Performed software updates and technical support tasks at customer locations.
- Configured customer devices and user accounts for deployment.

Student Worker, UNA Payroll Department, Florence, AL | October 2020–May 2021

- Assisted with digitizing and organizing payroll records and provided administrative support.

Projects

Anime Recommendation Generator Utilizing AI | Dec 2022

- Built a Python-based recommendation application using quiz-driven filtering algorithms and an anime database to generate personalized recommendations.

Text Based Game Engine | Dec 2021

- Developed a console-based C++ game engine capable of parsing structured text files to generate interactive text adventures with inventory systems, maps, and gameplay mechanics.

Technical Skills

- Languages: C#, JavaScript, Python, C++, SQL, R
- .NET / ASP.NET Core Razor Pages
- Node.js
- Microsoft SQL Server
- REST APIs & Webex APIs
- HubSpot Integrations
- Git & Azure DevOps
- AI-assisted development workflows (ChatGPT, Claude)
- Microsoft Office Suite

Honors & Awards

- Youth Leadership Shoals Graduate
- Lads to Leaders National Convention Speech Winner
